Street light poles or standards shall be served by underground cable throughout the subdivision. Service pedestals and transformers, as sources of supply at secondary voltages, may also be located in the easement ways.

1.2.2 Underground service cables and gas service lines to all structures within the subdivision may be extended from the nearest gas main, service pedestal, or transformer to the point of usage determined by the location and construction of such structure upon the lot, provided upon installation of a service cable or gas service line to a particular structure, the supplier of service shall thereafter be deemed to have a definitive, permanent, effective and non-exclusive easement on the lot, covering a 5 foot strip extending 2.5 feet on each side of the service cable or line extending from the gas main, service pedestal or transformer to the service entrance on the structure.
